Pour-In-Place Safety Net: Spec Sheet

Floor Hole Passive Fall Protection

- ❖ **PSN #120 Knotted Nylon Safety Net:** Engineered for maximum durability and safety.
- ❖ **Open Floor Hazard Security:** Effectively secures openings to prevent falls.
- ❖ **Fall Protection:** Safeguards personnel from potential fall hazards.
- ❖ **Material Containment:** Prevents tools and debris from falling through.
- ❖ **On-Site Sizing:** Easily adjusted for a perfect fit at the job site.
- ❖ **Simple Installation:** Can be installed with basic hand tools.
- ❖ **Versatile Placement:** Position over or under floor opening forms.
- ❖ **Easy Removal:** Can be cut away when no longer needed.

The Pour-In-Place Safety Net System is designed to secure open floor hazards with robust fall-through net protection. This effective safety net system safeguards workers from falls while containing materials, tools, and debris at floor level.

Made from high-strength PSN-rated nylon, the safety net is cut on-site and installed over floor opening forms. Its perimeter is securely attached to the surrounding rebar, ensuring that the net is firmly in place as the concrete is poured, embedding it securely on all sides.

Ideal for stairway, elevator, and duct openings, these Pour-In-Place nets offer passive fall protection, supplementing or replacing temporary floor covers. With the capability to absorb heavy dynamic loads, they provide an additional layer of safety on the job site. When no longer required, the netting can be easily cut away, allowing construction to proceed without delay.

Style:	PSN #120 x 3-1/2 inch
Material:	High Tenacity Nylon
FRStandard:	NFPA 701 Test Method 2
Color:	Black
Roll Sizes:	10' x 50' & 10' x 100'

Safety. Service. Solutions.
